

STANDARD COLORS

The standard colours in the Yawal range are available in several finishes including matt and structural. The technologically advanced production process guarantees repeatability of colours. Powders chosen by Yawal are characterised by increased resistance to adverse weather conditions. Standard colours in structural finish are offered in Qualicoat Group II, which provides extended UV resistance, so that the colour retains its original shade for many years. We make joinery for installation in facilities located by the sea or industrial areas confirmed by the Qualicoat Seaside certificate.

WOODEN-LIKE COLORS

The woodgrain finishes offered by Yawal guarantee the most faithful reproduction of the natural beauty of wood. Our wide range of colours is similar to the palette of PVC joinery manufacturers, which makes it a perfect complement to their offer for large-size constructions, such as HS type solutions. The technology used by Yawal also allows for other types of coating such as marble or granite. Options available on individual request. Lacquering of aluminium sheets, door panel coatings and sections is also possible.

ANODIZED COATING COLORS

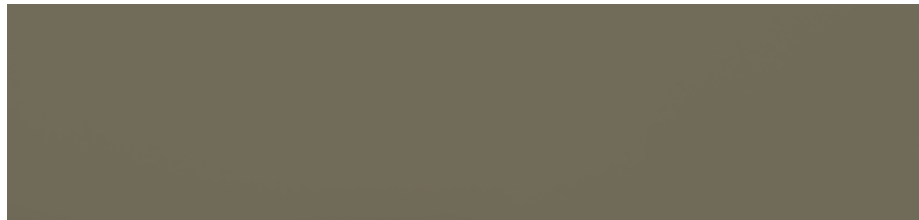

The process of anodising aluminium profiles increases their resistance to mechanical damage and corrosion. Surfaces subjected to anodising obtain a characteristic texture, and thanks to the addition of colouring substances, they obtain durable, indelible colour coatings on the surface.
